

Ultrasonic Cleaning

Sonicpro Fact Sheet

Ultrasonic Components

Description

UIC Ultrasonic components feature Dynamic Wave Sweep Function eliminating dead zones and standing waves typically associated with standard ultrasonic cleaners. SonicPro components are totally adjustable, allowing operator to mix and match power settings and sweep functions on individual generators as required. UIC ultrasonic components are commonly purchased for retrofitting older or nonfunctioning ultrasonic cleaning tanks. Installation kits are included with components and technical installation assistance is available. UIC also offers retrofitting services.
